

## TECH TIP: LEAF YELLOWING ON GARDEN MUMS

**Question:** Please look at this image and let me know what the issue is and what we can do about it.

**Answer:** This is likely low phosphorous. On mature garden mums, it expresses just below the buds. A hefty dose of 20-20-20 or even 20-10-20 can help.

*There is some good information published by Brian Whipker at North Carolina State University that may be of help: <http://www.egro.org/pdf/362.pdf>*
