

# TECH TIP: HANDLING HOT POINSETTIA CUTTINGS

Ball Tech On Demand moderator Bill Calkins is joined by James Doukas, Territory Manager for Ball FloraPlant and Selecta One sharing timely information for growers handling poinsettia cuttings that have heated up in transport. They discuss best practices when receiving cuttings, checking temperatures and recommended protocols to implement. Then, they move to specific cooling strategies before wrapping up with a look at when cuttings are beyond saving and should be dumped to cut your losses.
