

VIDEO: TOP TRANSPLANT TIPS

If you're firing up the transplant line, here's some advice based on years of experience and time spent in greenhouses during crunch time.

Click the link below for a video with Dr. Todd Cavins created to help your team through the transplant process. Although this might be a refresher, it's always good to share resources like this with your entire crew, especially newer members.

Check out this discussion about best practices related to transplanting plugs and liners.

In the video you'll learn "Todd's Top 5 Transplant Tips."

1. Don't delay!
2. Apply fungicide in the plug or liner tray.
3. Carefully manage plug and liner moisture at transplant.
4. Feed your transplants—nutrition is key!
5. Cycle your irrigation.

Watch this [VIDEO](#) for all of the details, trial photos, a time-tested feeding method and much more.
