Mini poinsettias make the ideal “grab-n-go” gift item when placed by the cash register at retail. Take advantage of this popular trend by ordering some of our best-selling varieties in mini cutting form, which we have indicated throughout the book.
ONLY THE BEST, FOR YOUR SUCCESS

Selecta One offers the highest-quality poinsettias sourced from the most reliable supply chain network while providing solutions to cover all your growing needs – for your most successful season yet!

RELIABILITY
We partner with the best, most extensive supply chain network in the industry to offer you the most availability and best-quality cuttings, where and when you need them. With production farms in Mexico, Nicaragua and Africa, we stop at nothing to provide our North American market with fast, reliable delivery. Read more about our dependable supply chain on page 28.

GROWER’S CHOICE
Selecta One is your growing partner from start to finish. We offer culture and growing recommendations that ensure predictability across all varieties. With our superior genetics and detailed regimes, you can enjoy ease of growing and profitability. Find culture tips throughout this catalog, and turn to page 36 for our comprehensive culture guide, so you can achieve your own perfect finish.

ONE-STOP SHOP
We cover all your growing needs, for every region, pot size and season! From rich reds to exciting novelties; from early season to just in time for Christmas – we’ve gathered the best collection of poinsettias in the industry in one place to make your selection quick and easy. Plus, we are the number one breeding company in poinsettias series, ensuring uniformity so you can add multiple colors to your program without changing your production process.

Take a look at our extensive assortment throughout this catalog to get started on your successful season!
As your growing partner, we know one of the most important steps in planning your poinsettia season is choosing the right varieties that will offer the best growing results in your region. Through extensive trialing in many areas around the world and contiguous feedback from commercial growing operations in North America, we are able to fine-tune our selection to ensure the best possible recommendations for every region.

Along with our robust assortment of trialed and proven poinsettias, we’ve provided an easy regional mapping tool throughout this catalog to aid in your selection. Look for the shaded map near many of our products to help determine the right poinsettias for your region and program.

Our expansive North American trial locations include: Niagara, ON; Arroyo Grande, CA; Salinas, CA; Charlotte, NC; West Chicago, IL; Monroeville, NJ; and Miami, FL.
As the only true-orange poinsettia on the market, NEW Orange Glow is a vibrant, large-bracted novelty poinsettia that stands out among the rest. This early-flowering, easy-to-grow variety is the perfect choice for mid-to-late November novelty programs, finishing just in time for Thanksgiving week. Plus, the true-orange color makes it a natural Fall decorating item!

**CULTURE THAT WORKS**

**PROPAGATION**
- Roots rapidly; plant from a liner at 22-24 days
- Apply rooting hormone at the base of the cutting
- Uses feed aggressively; start feed program around day 7; failure to feed early enough will result in yellowing
- Plant into finished container when well-rooted

**EARLY FINISHED GROWTH**
- Strong-branched variety; pinch early: at day 14-16 from a liner; at day 24-26 for direct-stick; failure to pinch early can result in uneven branching
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 750 ppm; recommended to even out the branches
- Prevention strategies for *Pythium* and *Rhizoctonia* are recommended shortly after planting into finished containers

**LATE GROWING STAGES**
- Requires continuous feed until finish; watch media EC and reduce feed levels to avoid rapid increase in media EC, this indicates plants’ need for nutrition is waning
- High EC at finish can result in root damage, reduced shelf life and possible *Pythium*
- Can be held cool; avoid dew point to prevent *Botrytis*

**GARY’S NOTES**

“In all my years working with poinsettias, I have never seen a real orange poinsettia like this one. Early timing and large bract make this a game changer.”

**GROWING ON**
- Grows steadily once the branches develop and exhibits strong growth through mid-October; slows down somewhat as finish approaches
- Northern Climate: PGR limited to Cycocel spray at 750-1,000 ppm
- Southern Climate: Can use Cycocel spray up to 1,200 ppm; use 1-2 spray applications of B-Nine (1,000 ppm)/Cycocel (750 ppm) before September 20
- Late PGR applications: Cycocel spray 500-750 ppm, end October 10
- Micro Bonzi drenches can begin in early October

**NEW ORANGE GLOW**
GAME-CHANGING, TRUE ORANGE

CHRISTMAS BEAUTY™ SERIES

OUR #1 TOP-SELLING SERIES

Christmas Beauty is the top-selling series in the Selecta One lineup. This space-saver finishes mid-season and features a controlled habit for excellent sleeveability. This Southern favorite offers superior performance under warmer conditions, while still performing great under cool finishing conditions as well. It is bred for maximum space efficiency and has strong roots for long-lasting plants and less shrink – making Christmas Beauty an excellent choice for mixes and mini cuttings!

CULTURE THAT WORKS

PROPAGATION
- Plant from liner at 22-24 days
- Apply rooting hormone at the base of cutting
- Start feed program at day 7 to prevent yellowing
- May not require PGR application in propagation
- Will branch very early based on leaf maturity, not just pinch
- Plant into finished container when well-rooted

EARLY FINISHED GROWTH
- Pinch early: at day 14-16 from a liner; at day 24-26 for direct-stick
- Plant produces a branch at every node
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm)
- Apply Cycocel spray at 500 ppm to even out branches

GROWING ON
- Grows steadily once the branches develop and exhibits consistent moderate growth throughout the crop until color begins
- Northern Climate: Apply Cycocel spray at 500 ppm
- Southern Climate: Can use Cycocel spray up to 1,000 ppm; use 1-2 applications of B-Nine (1,000 ppm)/Cycocel (500 ppm) before September 20
- Apply later Cycocel sprays at 500-750 ppm
- Micro Bonzi drenches can begin in early October

LATE GROWING STAGES
- Requires continuous feed until finish
- Reduce feed levels if media EC increases too rapidly
- High EC at finish can result in root damage, reduced shelf life and possible Pythium

“Christmas Beauty Red has an excellent red color that is very resistant to fading. It can be held cool, but pay attention to the humidity and avoid dew point to prevent Botrytis.”

GARY’S NOTES
CHRISTMAS JOY™ SERIES
BEST SERIES FOR MIXING

Christmas Joy is ready a week before Thanksgiving and will color up right on time for Black Friday – hitting the early market without needing black cloth. Medium-vigor, even-branching series makes it to retail intact and offers less shrinkage. Plus, Christmas Joy White is the top-selling white poinsettia in the Selecta One lineup. Due to the uniformity across all colors, Christmas Joy is also our number one series for mixed containers. Grow this one cool to save energy and money.

GARY’S NOTES

CULTURE THAT WORKS

PROPAGATION
- Plant from liner at 22-24 days
- Apply rooting hormone at the base of cutting
- Start feed program at day 7 to prevent yellowing
- Apply 500 ppm Cycocel spray at day 18-20
- Plant into finished container when well-rooted

EARLY FINISHED GROWTH
- Pinch early: at day 14-16 from a liner; at day 24-26 for direct-stick
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 500 ppm
- Prevention strategies for Pythium and Rhizoctonia are recommended shortly after planting into finished containers

GROWING ON
- Grows steadily once the branches develop and exhibits strong growth through mid-October, then slows down significantly as it approaches finish
- Northern Climate: Apply Cycocel spray at 500-750 ppm
- Southern Climate: Can use Cycocel spray up to 1,000 ppm; use 1-2 applications of B-Nine (1,000 ppm)/Cycocel (500 ppm) before September 20
- Apply later Cycocel sprays at 500-750 ppm, ending by October 10
- Micro Bonzi drenches can begin in early October, but should be stopped by October 15

LATE GROWING STAGES
- Requires continuous feed until finish
- Reduce feed levels if media EC increases too rapidly
- High EC at finish can result in root damage, reduced shelf life and possible Pythium
- Can be held cool, but pay attention to the humidity and avoid dew point to prevent Botrytis
- To hold Joy varieties, it is important to cool down temperatures to avoid color fade in the red

“Christmas Joy varieties grow steadily once the branches develop, with stronger growth through mid-October. Then they slow down significantly as they get closer to finishing.”

CHRISTMAS FEELINGS™ SERIES

RELIABLE, DESIRABLE, PROFITABLE

This top-selling series is great for mixes, due to its reliable uniformity across an impressive color range! Space-efficient, easy-to-grow Christmas Feelings saves time and money with low energy input and low PGR requirements. Plus, no late-season stretch ensures you can send better-looking plants to market. This series offers a strong habit for more saleable plants, excellent post-harvest characteristics and dependable timing to finish for peak shipping. Red, White and Pink are available as mini cuttings.

**CULTURE THAT WORKS**

**PROPAGATION**
- Plant from liner at 21 days
- Apply rooting hormone at the base of cutting
- Start feed program at day 7 to prevent yellowing
- May not require PGR application in propagation
- Will branch very early based on leaf maturity, not just pinch
- Lower leaves will break first, and if allowed to become dominant, can result in stem breakage late in the crop
- Plant into finished container when well-rooted

**EARLY FINISHED GROWTH**
- Pinch early: at day 12-14 from a liner; at day 22-24 for direct-stick
- Plant produces a branch at every node
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 500 ppm

**GROWING ON**
- Grows steadily once the branches develop and exhibits consistent moderate growth throughout the crop until color begins
- Northern Climate: Apply Cycocel spray at 500 ppm
- Southern Climate: Can use Cycocel spray up to 1,000 ppm; B-Nine/Cycocel tank mixes should not be used
- Micro Bonzi drenches can begin in early October, but use caution, as plants are very responsive to PGR, especially Bonzi

**LATE GROWING STAGES**
- Requires continuous feed until finish
- Reduce feed levels if media EC increases too rapidly
- High EC at finish can result in root damage, reduced shelf life and possible Pythium

“Christmas Feelings has exceptional shelf life and can be kept in the greenhouse at cool temperatures for late-season sales.”
CHRISTMAS SEASON™ SERIES
BIG, BOLD & BEAUTIFUL

Very early-season, energy-efficient series for 6-in. (15-cm) pot programs and larger. Christmas Season has big, showy bracts and dark green foliage that will captivate customers. This series is recommended for the Deep South, as it thrives under warm conditions, and with a full color range it is an excellent choice for mixes.

Vigor: Wide

PINK
WHITE
MARBLE
RED

“The Christmas Season series is the best choice for early, large pot tricolor production.”

CULTURE THAT WORKS

TIP: The Christmas Season series requires earlier, more aggressive applications of Cycocel after the pinch, when lateral branches are 1-1.5 in. (2.5-4 cm) in length, to promote stem strength.
CHRISTMAS GLORY™ SERIES
SMALLER POTS, ENERGY EFFICIENT

Compact series is perfect for 6-in. (15-cm) and smaller pots and thrives in cool temperatures for better energy savings. Christmas Glory provides uniformity across all colors, and even branching, with bright, non-fading bracts all on top. The entire series is available as mini cuttings for perfect “grab-n-go” gift items this season.

RED
CHRISTMAS MAGIC™ RED
PREDICTABLE, PROGRAMMABLE, PERFECTION

The best option for early, compact, red poinsettias! This variety provides a more saturated, non-fading color and offers even branching with a better bract presentation on top of the plant for a higher-quality product. Plus, this variety is ideal for Southern growing and won’t delay in the heat. Christmas Magic Red is predictable, programmable and perfect for early Thanksgiving — hitting the week 46 and 47 sales without ever missing a ship date.

Vigor: Normal

“Christmas Magic Red is specifically targeted for early sales of small to mid-sized containers, and should be shipped when ready.”

CULTURE THAT WORKS

PROPAGATION
- Roots rapidly; plant from a liner at 22-24 days
- Apply rooting hormone at the base of cutting
- Start feed program at day 7
- May not require PGR application in propagation
- Plant into the finished container when well-rooted
- Feed aggressively; failure to feed early enough will result in yellowing and hardening

EARLY FINISHED GROWTH
- Pinch early: at day 14-16 from a liner; at day 24-26 for direct-stick
- Low-vigor varieties require less PGR for growth control
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 500 ppm

GROWING ON
- Grows steadily once the branches develop and exhibits consistent slow growth throughout the crop until color begins
- Northern Climate: Apply Cycocel spray at 500 ppm
- Southern Climate: Can use Cycocel spray up to 750 ppm; use B-Nine/Cycocel tank mixes with caution in the South and not at all in the North
- Use caution, as plants are low vigor and very responsive to PGR, especially Bonzi

LATE GROWING STAGES
- Requires continuous feed until finish
- Reduce feed levels if media EC increases too rapidly
- High EC at finish can result in root damage, reduced shelf life and possible Pythium
- A Bonzi application (1 ppm drench, or 5 ppm spray) can be applied at the very end of the crop at first pollen shed to increase the shelf life and retain the cyathia
CHRISTMAS EVE RED
EARLY SEASON, VIVID RED

Christmas Eve Red is a strong, early-season, vivid red variety with superior color retention and a long-lasting shelf life. Its upright, narrow habit and medium bract size make it an ideal variety for higher density production and shipping. Eve works well in 6-in. (15-cm) pots and times perfectly for Thanksgiving. Available as a mini cutting!

Vigor ☻☻☻☻☻
Narrow

"Christmas Eve Red is an early variety that will grow very little in late October and November."

CULTURE THAT WORKS

PROPAGATION

• Roots rapidly; plant from liner at 19-21 days; apply rooting hormone to base of cutting
• Uses feed aggressively; start feed program around day 7; failure to feed early enough will result in yellowing
• High vigor level; will require PGR application in propagation: 500-750 ppm Cycocel spray at day 15-20 and can be repeated if necessary
• Plant from liners to finished container when well rooted, prevents stretch

EARLY FINISHED GROWTH

• Must be pinched early: at day 14-16 from a liner; at day 24-26 for direct-stick; failure to pinch early will result in uneven branching
• Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 500-750 ppm; recommended to even out the branches
• Branching occurs rapidly after pinch; PGR may be needed at 7 days
• Very upright habit and can go to final spacing very early if needed; rings can be avoided, even in large pots

GROWING ON

• Grows aggressively when branches develop; strong growth through mid-October, then slows as finish approaches
• Northern Climate: PGR limited to Cycocel spray at 500-1,000 ppm
• Southern Climate: Use 1-2 spray applications of B-Nine (1,000 ppm)/ Cycocel (500 ppm) before September 20
• Late PGR applications: Cycocel spray 500-750 ppm, end October 15
• Micro Bonzi drenches can begin in early October through October 15; Eve is an early variety that will grow very little in late October and November

LATE GROWING STAGES

• Feed continuously until finish; watch media EC and reduce feed levels to avoid rapid increase; indicates plants’ need for nutrition is waning
• High EC at finish can result in root damage, reduced shelf life and possible Pythium
• Can be held cool to target week 50-51 sales; avoid dew point to prevent Botrytis
CHRISTMAS BELL S
END OF SEASON, ’TIS THE REASON

An exceptional mid-to-late poinsettia variety for almost all regions. Christmas Bells provides vibrantly rich, deep red-colored bracts. The very strong, upright, V-shaped habit works well with no rings in larger containers. This variety is the best late-season choice for Northern growers, with an excellent post-harvest performance.

"Christmas Bells is a great option for late November to early December sales."

CULTURE THAT WORKS

GARY’S NOTES

“Christmas Bells is a great option for late November to early December sales.”

PROPAGATION

- Roots rapidly; plant from liner at 19-21 days; apply rooting hormone to base of cutting
- Uses feed aggressively; start feed program around day 7; failure to feed early enough will result in yellowing
- High vigor level will require PGR application in propagation; 500-750 ppm Cycocel spray at day 15-20 and can be repeated if necessary
- Plant from liners to finished container when well rooted, prevents stretch

EARLY FINISHED GROWTH

- Must be pinched early; at day 14-16 from a liner; at day 24-26 for direct-stick; failure to pinch early will result in uneven branching
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 500-750 ppm; recommended to even out the branches
- Branching occurs rapidly after pinch; PGR may be needed at 7 days
- Very upright habit and can go to final spacing very early if needed; rings can be avoided, even in large pots

- Late PGR applications: Cycocel spray 500-750 ppm, end October 15
- Micro Bonzi drenches can begin in early October; too aggressive PGR applications in October can result in smaller bracts

LATE GROWING STAGES

- Feed continuously until finish; watch media EC and reduce feed levels to avoid rapid increase; indicates plants need for nutrition is waning
- High EC at finish can result in root damage, reduced shelf life and possible Pythium
- Finishes naturally in late November to early December; can be held cool to target week 50-51 sales; avoid dew point to prevent Botrytis

14 | HIGHEST-QUALITY GENETICS FROM THE NUMBER ONE SUPPLY CHAIN
CHRISTMAS AURORA
BRIGHTEN UP THE LATE SEASON

Christmas Aurora is a great choice for December poinsettia sales. Its upright, narrow habit and medium bract size is ideal for higher density production and dependable shipping. Aurora features intense red bracts, and a narrow shape that makes it easy to sleeve. This reliable, predictable poinsettia works well in 6-in. (15-cm) pots. Plus, it is early to color but late to flower — providing an outstanding shelf life at retail and long-lasting enjoyment for the consumer.

Vigor: ★★★★☆

CHRISTMAS ANGEL
EARLIEST CHOICE, GREAT HOLD

Christmas Angel is the earliest poinsettia in the Selecta One lineup! This variety features non-fading, deep red color. Its medium-high vigor makes Angel perfect for early, medium and large pots. Plus, the excellent cyathia retention provides the best holding of any very early poinsettia.

GARY’S NOTES

“"The best choice for very early-season sales. To hold Angel varieties, it is important to cool down temperatures to avoid color fade.""

CULTURE THAT WORKS

PROPARATION

- Roots rapidly; plant from liner at 22-24 days; apply rooting hormone to base of cutting
- Uses feed aggressively; start feed program around day 7; failure to feed early enough will result in yellowing
- High vigor level; may require modest levels of PGR application in propagation; 500-750 ppm Cycocel spray at day 18-20
- Plant from liners to finished container when well rooted, prevents stretch

EARLY FINISHED GROWTH

- Must be pinched early: at day 14-16 from a liner; at day 24-26 for direct-stick; failure to pinch early will result in uneven branching
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 750 ppm; recommended to even out the branches
- Prevention strategies for Pythium and Rhizoctonia are recommended shortly after planting into finished containers

GROWING ON

- Grows steadily once branches develop and exhibits strong growth through mid-October; slows down somewhat as finish approaches
- Northern Climate: PGR limited to Cycocel spray at 750-1,000 ppm
- Southern Climate: Can use Cycocel spray up to 1,200 ppm; use 1-2 spray applications of B-Nine (1,000 ppm)/Cycocel (750 ppm) before September 20
- Later PGR applications: Cycocel spray 500-750 ppm, end October 10
- Micro Bonzi drenches can begin in early October

LATE GROWING STAGES

- Requires continuous feed until finish; watch media EC and reduce feed levels to avoid rapid increase in media EC, this indicates plants’ need for nutrition is waning
- High EC at finish can result in root damage, reduced shelf life and possible Pythium
- Can be held cool; avoid dew point to prevent Botrytis
- Bonzi spray application of 5-10 ppm at first pollen recommended at full color, helps retain cyathia and reduce fade

SelectaNorthAmerica.com or 800 879-2255 | 17
Christmas Cheer is a very dark red-bracted poinsettia with medium vigor. This easy-to-grow variety is extremely uniform in production, and is an earlier version of Christmas Day Red.

**Vigor**

- Normal

**8 WEEKS**

**YOUR GO-TO RED**
CHRISTMAS WISH™ SERIES
BRILLIANT, MID-SEASON COLOR

Right in line with Christmas Cheer, Christmas Wish Red features a slightly brighter red color that won’t fade in the heat of the South. The series features long-lasting cyathia for extended life on the bench and on the shelf. Its break-resistant, V-shaped habit means it ships and shows strong, and a high-quality root system offers higher yield and lower shrink.

GARY’S NOTES

CULTURE THAT WORKS

PROPAGATION
- Roots well; plant from a liner at 24 days
- Apply rooting hormone at the base of cutting
- Start feed program at day 7
- Feed aggressively; failure to feed early enough will result in yellowing and hardening

EARLY FINISHED GROWTH
- Pinch early: at day 14-18 from a liner; at day 28 for direct-stick
- Breaks begin to grow 5-7 days after pinch
- In low-humidity climates, Florel applications before and/or after pinch may help hasten branching

“Christmas Cheer grows steadily once the branches develop, exhibiting consistently slow growth throughout the crop until color begins, while Christmas Wish is slower out of the pinch than many other Selecta One varieties.”

GROWING ON
- Grows steadily once the branches develop and exhibits consistent slow growth throughout the crop until color begins
- Apply light PGR when branches are 1-1.5 in. (2.5-4 cm) using Cycocel spray at 500-750 ppm
- Apply more aggressive PGR when branches are 2 in. (5 cm)
- Southern Climate: Use 1-2 applications of B-Nine (1,000 ppm)/Cycocel (500 ppm) before September 20
- Apply later Cycocel sprays at 500-750 ppm, with last applications by October 10
- Micro Bonzi drenches can begin in early October

LATE GROWING STAGES
- Requires continuous feed until finish
- Reduce feed levels if media EC increases too rapidly
- Requires that the finished pH be maintained below 6.6 to prevent magnesium deficiency. This shows up in the form of interveinal chlorosis near the outer part of the leaves about 3/4 of the way up the plant, usually in late October. If this occurs, foliar applications of chelated magnesium can be applied.
NOVELTIES & STAR SELLERS

These cutting-edge varieties offer all the consistency, excellent plant structure and efficiency of standard poinsettias, with the unique colors and textures that stand out and shine at retail!

MARBELLA
Best-selling novelty poinsettia has an exceptional pink and white color contrast that intensifies with cool finishing but keeps stable in warmer temperatures. Marbella is a great addition to large pot programs.

Vigor 5 Wide

SNOWY WHITE
As one of our brightest white poinsettias, Snowy White is excellent for painting! Strong, easy-to-grow variety features large, showy bracts. Plus, the V-shaped, well-branched habit means less breakage – for superior sleeveability and shippability.

Vigor: Normal

CHRISTMAS DAY RED
This top-quality variety offers long-lasting cyathia for superior holdability on the bench, and timing that won’t delay when grown cool to save energy. It also features a strong root system that is proven to withstand flood-floor irrigation. Christmas Day Red is versatile for a range of pot sizes, and its medium vigor is easy to control with minimal PGRs. Plus, it is available as a mini cutting.

8 WEEKS

Vigor: Normal
HOLLY BERRY

Holly Berry is a strong, holly-bracted, rounded, red novelty poinsettia. Its low vigor and superior branching make it ideal for small pots and dish gardens. Plus, Holly Berry is suitable for high-density production in smaller pots.

Vigor:

- Normal

8-8.5 WEEKS

VALENTINE

Add captivating appeal to your program with romantic Valentine. Featuring long-lasting cyathia for extended shelf life, this variety is adaptable to pot and cut flower use.

Vigor:

- Narrow

8 WEEKS
NOVELTIES & STAR SELLERS CONTINUED

These cutting-edge varieties offer all the consistency, excellent plant structure and efficiency of standard poinsettias, with the unique colors and textures that stand out and shine at retail!

CHRISTMAS MOUSE®

Christmas Mouse has exciting, “mouse ear” bracts – completely unique to the market! This upright, medium-vigor poinsettia is an easy-to-grow, red-bracted novelty. This variety is a great product for young consumers.

Vigor: Normal

8-8.5 WEEKS

POINT-OF-PURCHASE ARTWORK

Contact your favorite vendor for artwork

Stick Tags  Mini Pot Wrap  Pot
CHRISTMAS TRADITION

Timed for late-season church and fundraiser use, this traditional, highly vigorous poinsettia features an elegant dark red color and non-fading bracts — even in high light. Excellent indoor shelf life keeps it beautiful for the entire Christmas season.

Vigor: Wide

9.5 WEEKS

GARY’S NOTES

CULTURE THAT WORKS

For Gary’s Notes and culture information on these novelty varieties and star sellers, visit selectanorthamerica.com/poinsettias.
LAZZERI VARIETIES

ALASKA
Alaska is the brightest, whitest poinsettia on the market! This pure white variety with an ideal mid-season finish features attractive holly-shaped leaves and bracts. It has good post-harvest performance and works well in normal and cool-finish regimes.

Vigor: ★★★★★
Narrow

“Alaska is truly the whitest white on a solid plant.”

ALPINA
As one of the whitest poinsettias on the market, Alpina provides early-season color ideal for week 47 sales. Plus, the medium vigor works well in many pot sizes.

Vigor: ★★★★★
Normal

“Alpina is a great early-season, true white variety, but avoid keeping cool for long periods to maintain brightness of the white color.”

SUPERBA NEW GLITTER
The new first choice for glitter novelties is here! Superba New Glitter is a medium-vigor poinsettia with large, showy bracts. Mid-season timing makes Superba a superior choice among glitter varieties on the market.

Vigor: ★★★★★
Normal

“The only choice for mid-season true red/white glitter varieties.”
EVERY SELECTA ONE POINSETTIA IS BRED FOR:

V-SHAPED, WELL-BRANCHED HABITS
Selecta One poinsettias are less prone to breakage, so they sleeve and ship beautifully, arriving at retail in excellent condition.

LONG-LASTING CYATHIA
Superior plant structure ensures an outstanding shelf life on the bench and at retail, and more weeks of enjoyment for consumers.

STRONG ROOTS
These durable roots stand up to a range of watering methods, including flood-floor irrigation, for lower shrink and higher yield.

GARY’S NOTES
Gary Vollmer, Selecta One Technical Support Manager

CULTURE THAT WORKS
Straight from the expert! Find recommendations from Product Manager Gary Vollmer throughout this catalog, offering growing advice and culture tips to ensure your crop is healthy and beautiful. For technical guidance on all of our poinsettia offerings, drop Gary a line at gvollmer@ballhort.com.

Visit selectanorthamerica.com/poinsettias to find more of our extensive culture information, including recordings of the three-part webinar series featuring a panel of Selecta One experts who cover best management practices of poinsettias – from propagation through finishing.

Find recordings of the webinar series at selectanorthamerica.com/webinars
Selecta One’s extensive supply chain network offers you reliable delivery of exactly what you need, when you need it. We partner with Vivero, an experienced production farm in Cuernavaca, Morelos, Mexico, to provide our North American market with fast, reliable delivery of unrooted product. Our expert team grows every cutting for consistent quality and optimal size for rooting, then ships your poinsettias in one convenient shipment. With frequent flights from Mexico to the U.S. and Canada, you get the cuttings you need quickly and in excellent condition.

Our network of suppliers in Las Limas, Nicaragua and Uganda provides the same full selection of products and can provide unrooted cuttings to North America at any time. Callused cuttings are available from Las Limas and Vivero.

**Unrooted Cuttings (URC)**
- **Variety minimum/multiples:** 100
- **Order minimum:** 2,000
- Unrooted cuttings are shipped with 1.6-in. (4-cm) stem length, 4 to 5-mm stem diameter and 3 to 4 mature leaves.

**Callused Cuttings (CC)**
- **Variety minimum/multiples:** 100
- **Order minimum:** 2,000
- Callused cuttings are harvested to the same specifications as our unrooted cuttings and shipped with a solid callus just prior to root formation.

**Rooted Cuttings (RC)**
- Our Root & Sell Stations produce superb quality, ready-to-go rooted cuttings. Find the complete list on the back cover of this catalog. Contact your preferred distributor for more details.

**Mini Cuttings (URC)**
- Mini poinsettia unrooted cuttings (URC) are grown specifically for a smaller, toned cutting compared to our normal URC spec.
SELECTA ONE CLEAN & FIELD TESTED VARIETIES

Every poinsettia variety is rigorously tested before entering our program and is subject to the same testing annually. Our Selecta Clean Stock program follows strict, internationally recognized protocols and is based on 60 years of experience. Clean stock starts in the Selecta Clean Stock facility in Stuttgart, Germany. Our Field Tested varieties are trialed extensively for both grower and consumer performance.

For more information, visit SelectaNorthAmerica.com or call 800 879-2255.

Order your Unrooted and Callused Cuttings 24/7 through WebTrack® at ballseed.com/webtrack, or contact your Ball Seed® sales rep.

**Notes:**
2 Cool Growing: Varieties are rated from most (❄❄❄) to least (❄) efficient. Contact us for guidelines.
1 Available as Mini Unrooted Cutting (URC).
This easy-to-use culture guide provides helpful growing info and production tips... so be sure to keep it nearby as you plan – and plant – your perfect poinsettia crop.

**PROPAGATION GUIDE**

**Unrooted Cuttings**

Open boxes upon arrival and check the temperature inside the box. Unpack the cuttings in a cooler at 50°F (10°C) and monitor temperatures throughout the unpacking, storing and sticking process. If temperature is greater than 70°F (21°C), allow cuttings to cool down before sticking. Keep the cuttings moist and turgid while handling, and avoid letting them get too warm.

Stick cuttings in media-filled liner trays, preferably using a stabilized media such as Ellepot or Oasis.

**Note:** It’s preferable to stick unrooted cuttings right away. But if you must store cuttings, keep them cool at 50°F (10°C) for no more than 24 hours. After sticking, keep propagation environment shaded and cool for the first two days to limit stress that can result from the transition to propagation of a cooled cutting.

**TIP:** A single application of a low-dose CapSil in the first 24 hours can help maximize efficiency of misting and reduce stress on cuttings. High doses and/or repeated applications will cause distortion of new growth. Use Capsil at a rate of 1 to 2 oz./100 gal. to break the surface tension of water on the leaf.

Growers should use the information presented in this guide as a starting point. Crop times will vary depending on the climate, location, time of year and greenhouse environmental conditions. Chemical and PGR recommendations are only guidelines. It is the responsibility of the applicator to read and follow all the current label directions for the specific chemical being used in accordance with all regulations.
Stage 1: Callus (First 7 Days)

Apply rooting hormone to base of cuttings. Low rates of rooting hormone can be applied overtop, after sticking the cuttings. Rates must be very low for this strategy to avoid phytotoxicity. Stick and mist cuttings ASAP to avoid wilt. Keep humidity up and keep mist levels high, including some at night, from Day 1 through Day 4. Use lower light levels with shading and keep air temperature below 90°F (32°C). Callus will start to form 5 to 7 days after sticking.

Broad spectrum fungicide can be applied a few days after sticking as a preventative treatment to reduce disease pressure. Soil temperatures of 72 to 75°F (22 to 24°C) are best for callus formation.

Stage 2: Root Out (Days 8 to 14)

Reduce mist to force root growth. After reducing mist frequency, spray with a broad spectrum fungicide and/or bactericide in the evening, allowing the chemical to adhere to the plant. Avoid saturated media to speed up root initiation. Once rooting has begun, start reducing soil moisture to build root system. Begin fertilizing at this stage with 150 ppm N of balanced fertilizer that contains Calcium (Ca) and Magnesium (Mg). Visible roots will appear by Day 10. Eliminate mist by Day 14.

TIP: Watch for fungus gnats and treat preventatively!

TIP: Avoid foliar fertilizers with phosphorus.

Stage 3: Finished Propagation (Days 15 to 28)

Continue feeding every other irrigation with 150 ppm N in a balanced soluble fertilizer. Continue to spray with a broad spectrum fungicide every 7 to 10 days. If plants are growing too quickly, you can apply PGRs around Day 16 and again at Day 22. We recommend Cycocel 750 ppm spray. For more control on fast-growing varieties, you can increase the Cycocel rate to 1,000 ppm and/or decrease the time between applications to 4 days. If you don’t get enough control with Cycocel alone, try a tank mix of B-Nine 1,000 ppm/Cycocel 500 ppm. In the last week of propagation, it is recommended to begin to raise light levels and reduce temperatures to harden the liners for planting. Cuttings are ready to plant by Days 23 to 28.
Finishing Environment

**Day temperatures:** 68 to 78°F (20 to 26°C)
**Night temperatures:** 65 to 70°F (18 to 21°C)

Keep humidity high during early finishing stages by wetting floors and minimizing air movement. We recommend drip irrigation and high-porous potting plant media with pH adjusted with limestone. Be sure media is well-drained, with a maintained pH of 5.7-6.2. Avoid pH of 6.6 and higher at finish, as high pH and reduced fertility levels can contribute to bract edge burn and Mg deficiencies. Negative DIP works well for height control – 1 hour before sunrise until 3 hours after.

**TIP:** Reduce feed to lower levels as the crop finishes in November.

Deficiencies

The most common deficiencies are Calcium and Magnesium. Lack of Ca causes bract edge burn on poinsettias. Ca moves in water, so high transpiration rates are important. Make sure to supply Ca in fertilizer; not all “balanced” feeds have Ca. Many growers utilize Calcium Chloride or Calcium Chelate sprays starting in mid-to-late October, to help with bract edge burn. Elevated pH is associated with higher Calcium feeds and/or water alkalinity. This can result in Mg deficiencies. If pH is above 6.3 in mid-October, supplemental Mg is needed.

**Other Deficiencies**

- Potassium deficiency
- Phosphorus deficiency
- Calcium deficiency
- Nitrogen deficiency
- Iron deficiency
- Magnesium deficiency
- Boron deficiency
- Molybdenum deficiency

Water and Fertilizer

Maintain even media moisture, avoiding dramatic swings from wet to dry. This may damage roots and contribute to *Pythium* root rot.

Maintain a media pH of 5.7-6.3. Poinsettia should be grown with a constant liquid feed program of 200-250 ppm N. Cal-Mag feed is recommended, as they need a good source of Ca. Know your water quality to choose correct fertilizer and better manage media pH, as pH above 6.5 can trigger Mg deficiency.

Maintain a media EC of 1.2-2.0 from a pour-through or 0.8-1.3 for a 1:2. A healthy and active growing poinsettia will consume a lot of fertilizer. If consistently fertilizing and you find that media EC is still low – that is okay, modern poinsettias will aggressively uptake nutrition. Utilize tissue and analysis to ensure nutrition is adequate. Plus, don’t forget the Moly!
Pinching

Pinching the plants before the breaks significantly form is critical to support even branching. On very early branching varieties like Christmas Feelings, the pinch should be done on Day 12 to 14 after planting. On other varieties, the pinch should be done when the roots reach the edge of the pot. Late pinching will result in uneven branching.

Pinch to leaf count based on finished specs – for example, 6 to 7 leaves below the pinch to produce a plant with 6 primary bracts. Don’t leave too many nodes below the pinch! This can lead to excess branching, wider plants and smaller bracts. Removing 1 to 2 leaves just below the pinch will increase light penetration, promoting stronger and more uniform branching.

Moisture Management Do’s and Don’ts

Part of a good moisture management program is focusing on building your foundation by creating a consistent language of moisture levels within your growing team. Staying in the middle of the road and quantifying your moisture levels, and when and how much to water, will help to keep your crop healthy.

Avoid growing “dry” in an effort to prevent root diseases, but also be careful of big swings in moisture management or overhead watering late in the day. Providing your team with a planned watering procedure will keep them from having to guess when and how much to water.

Where nutrition deficiency symptoms occur on the poinsettia plant

- Magnesium, Copper
- Calcium, Boron, Molybdenum
- Iron, Manganese, Zinc
- Nitrogen, Phosphorus, Potassium, Boron (toxicity), Manganese (toxicity)
- Iron, Manganese, Zinc

Proper water management leads to perfect roots

Before pinching

After pinching

Branch development after 7 days
Florel Application Prior and Post-Pinch (Florel Sandwich)

Applications of Florel at rates from 200 to 400 ppm 5 days prior and 5 days after the pinch is a technique that has been used to help ensure good branching in varieties and conditions where branching can be inhibited.

This can cause a “PGR effect” that will continue through the crop cycle. It is not necessary on many new, very free-branching varieties.

Early PGR Application

To reduce internode length, encourage even branching and produce a plant better suited for pinching, apply Cycocel 750 to 1,200 ppm spray or B-Nine 1,000 ppm/Cycocel 750 ppm tank mix spray prior to pinch. Start applications in propagation and continue after transplant as needed.

Apply after pinching when new shoots measure at least 0.75 in. (2 cm), and repeat. This will even out the branches and reduce apical dominance.

Flower Induction

Most varieties will begin to induce flowers between September 10 and 25. Light pollution and excessive heat can delay flowering. Blackout and long-day lighting can be used to manipulate maturity dates. Avoid warm nights above 72°F (22°C) from 1 week prior to initiation through October 10.

Temperatures

Ideally, you’ll want to keep day temperatures between 75 to 86°F (24 to 30°C) and night temperatures between 61 to 72°F (16 to 22°C) for optimal plant development.

Leaves will unfold at the highest rate around 75°F (24°C) average daily temperature (ADT). At around 80°F (27°C) ADT, development will slow. Keeping the ADT at 68 to 73°F (20 to 23°C) is a good target. Providing the correct temperature is especially important after initiation, and high temperatures remain a challenge for poinsettia growth.

Growing On PGRs

Use only PGR sprays, no drenches, until shoots are 2 in. (5 cm) in length. Use Cycocel 750 to 1,200 ppm spray or B-Nine 1,000 ppm/Cycocel 750 ppm tank mix spray early in the crop cycle to reduce stress and even out the branching. Avoid PGR applications within 1 week of initiation.

Stop PGR applications by October 10 (natural season crop), except for micro-drenches of Bonzi. Use only very low rates (1/10 to 1/20 ppm) during the bract expansion period in October and early November (natural season crop).

You may use late applications of Bonzi drench at 0.5 ppm to improve shelf life. This is best done at full bract coloration, just before pollen shed. Do not apply prior to full color.

TIP: Be sure to stop B-Nine applications by September 14!
**Spacing and Target Height Control**

Crop specifications typically include height, width and bract count. A 6-in. (15-cm) poinsettia is typically spaced 13 to 14 in. (33 to 36 cm) on center, with a finished height of 14 to 16 in. (36 to 41 cm) and a primary bract count of 5 to 6. Establish final spacing before the leaf canopy fully closes. Apply shade if possible right after spacing for a few days to avoid stress. Track height progress through the crop cycle to ensure you’re meeting your specifications and apply PGRs as needed.

**TIP:** For larger finished plant height, transplant earlier, providing a longer crop time from pinch to initiation.

**Scheduling Your Poinsettia Crop**

Here are two simple steps to help you determine when to order your cuttings.

First, do the math.

**Phase 1:** Allow 2 weeks from transplant to pinch.

**Phase 2:** See the chart below to determine your weeks from pinch to flower initiation. Note that we’ve based our timelines on a medium-vigor variety. Varieties with higher or lower vigor may move the pinch dates ahead or behind by 1 week.

**Phase 3:** Refer to the charts on pages 30 to 35 to find your weeks from flower initiation to retail-ready crop.

Now, based on your retail-ready date, count backwards to determine at what week you need to order your cuttings.

<td>4-6 oz./100 gal. of finished solution</td>
<td>Rhizoctonia</td>
<td>Trial First</td>
<td>This would be a 4-6 oz. per gallon of stock solution using a 1:100 injector</td>
<td></td>
</tr>
<tr>
<td>Rootshield Plus WP Trichoderma</td>
<td>3-8 oz.</td>
<td>Rhizoctonia</td>
<td>Trial First</td>
<td>Can use granular in place of WP (see label for rates)</td>
<td></td>
</tr>
<tr>
<td>Actinovate SP Streptomyces lydicus</td>
<td>6-12 oz.</td>
<td>Powdery Mildew</td>
<td>Trial First</td>
<td>Used as a foliar spray</td>
<td></td>
</tr>
<tr>
<td>Cease Bacillus subtilis</td>
<td>64-256 oz. (2-8 qt.)</td>
<td>Powdery Mildew</td>
<td>Trial First</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Milstop Potassium bicarbonate</td>
<td>20-80 oz.</td>
<td>Powdery Mildew</td>
<td>Yes</td>
<td>Use lower rates on bracts; trial first</td>
<td></td>
</tr>
<tr>
<td>Actinovate SP Streptomyces lydicus</td>
<td>4-6 oz./100 gal. of finished solution</td>
<td>Pythium</td>
<td>Trial First</td>
<td>This would be a 4-6 oz. per gallon of stock solution using a 1:100 injector</td>
<td></td>
</tr>
<tr>
<td>Rootshield Plus WP Trichoderma</td>
<td>3-8 oz.</td>
<td>Pythium</td>
<td>Trial First</td>
<td>Can use granular in place of WP (see label for rates)</td>
<td></td>
</tr>
<tr>
<td>Cease Bacillus subtilis</td>
<td>64-256 oz. (2-8 qt.)</td>
<td>Erwinia/Bacteria</td>
<td>Trial First</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Zerotol Hydrogen Peroxide + Peracetic Acid</td>
<td>42-128 oz. (1:100-1300)</td>
<td>Erwinia/Bacteria</td>
<td>Trial First</td>
<td>No residue; many peroxide products to choose from</td>
<td></td>
</tr>
