Cut Flowers

2024 Assortment

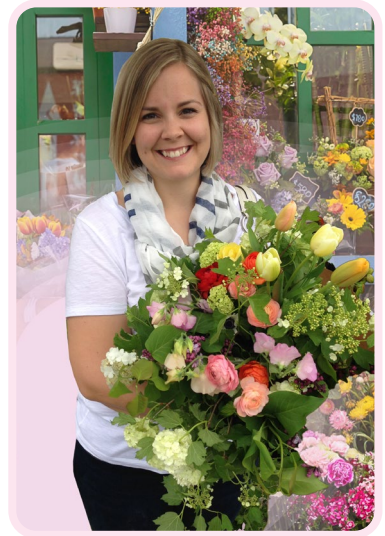

Harvest Your Potential™

Whether you're a seasoned flower farmer or a budding one still getting on your feet or someone looking for inspiration for varieties to offer home gardeners we've got the assortment for you. From easy-to-grow annuals to reliable, productive perennials our assortment offers a unique mix of the tried-and-true performers and some unique finds to get you noticed.

One of the best aspects of specialty cut flowers is getting to grow outside of the box! This year we are especially excited about additions to our cut mum and dahlia offerings — we hope you will give them a try and find your new favorites in these exceptionally productive and grower-friendly varieties. At Syngenta Flowers we pride ourselves in our professionally bred flowers and high-quality, clean production of seeds and cuttings.

Thank you for trusting us with your specialty cut flower needs to help you *Harvest Your Potential!*

Starting your cut flower dahlias from unrooted cuttings and transplanting liners rather than tubers has many benefits.

Our unrooted cuttings have been virus-indexed so they are free of the pesky viruses that can cause issues in tubers. This option can be less costly than tubers, is easier to plant, and delivers quality flowers in the same amount of time.

Foxglove

No vernalization needed for these tall stately stems in a beautiful array of colors. Available as a pelleted seed for easier handling and more uniform germination.

10 Tips

for maximizing vase life of cut flowers:

1

Start with superior genetics that have a long vase life.

2

Give your flowers the best growing conditions for their needs—high-quality plants will yield high-quality flowers.

3

Harvest flowers at the optimum stage of harvest for each species and for your marketing channel.

4

Typically morning harvests are best when stems have the highest water content and coolest tissue temperature.

5

Start clean, stay clean—harvest into sanitized buckets and clean water with the appropriate commercial floral preservatives.

6

Remove leaves from stems that are low enough to be submerged in the water.

7

Use commercial floral preservatives correctly and at the proper dosage.

8

Keep stems cool after harvesting—for every 18 °F (10 °C) increase in temperature respiration rates double and one day of vase life is lost!

9

Keep flowers from sources of ethylene (e.g., fruits, decaying plant material, combustion engines).

10

Prevent Botrytis during production and keep water off the flowers from rain or condensation when storing and packaging.

Vintro™ Forte Blue

Ordering Information

All of our varieties are available as seed, unrooted, callused, or rooted cuttings.

For ordering, availability and pricing, use WebTrack or contact your Ball Seed Sales Rep or the ColorLink Office.
