# GrowerFacts

## **Delphinium Summer**

(Delphinium grandiflorum)

## Germination

#### Time of radicle emergence (3-4 days)

- Night temperature 75-80°F (24-27°C).
- Day temperature 65-70°F (18-21°C).
- Delphinium germinates best if day/night temperatures are alternated.
- Keep media evenly moist but not saturated.
- Cover the seed with coarse vermiculite.
- Delphinium seed germinates best in the dark.
- Soil pH 5.5-5.8 and soluble salts (EC) less than
- 0.75 mmhos/cm (2:1 extraction). Delphinium is very sensitive to high salts, particularly high ammonium, during germination.
- Keep ammonium levels less than 10 ppm.

## Plug Production

#### STAGE 1 Time of radicle emergence (3-4 days)

- Night temperature 75-80°F (24-27°C).
- Day temperature 65-70°F (18-21°C).
- Delphinium germinates best if day/night temperatures are alternated.
- Keep media evenly moist but not saturated.
- · Cover the seed with coarse vermiculite.
- Delphinium seed germinates best in the dark.
- Soil pH 5.5-5.8 and soluble salts (EC) less than 0.75 mmhos/cm (2:1 extraction). Delphinium is very sensitive to high salts,
- particularly high ammonium, during germination.
- Keep ammonium levels less than 10 ppm.

#### STAGE 2 Stem and cotyledon emergence (6-8 days)

- Night temperature 75-80°F (24-27°C).
  Day temperature 65-70°F (18-21°C).
- Reduce moisture levels once radicle emergence occurs! Allow the soil to dry out slightly before watering for best germination and rooting
- Light levels should be between 500-1000 footcandles.
- Keep soil pH 5.5-5.8 and EC less than 0.75 mmhos/cm.
- Keep ammonium levels less than 10 ppm.
- Begin fertilizing with 50 75 ppm N from 14 0 14 or a calcium/potassium nitrate feed once cotyledons are fully expanded.
- Alternate feed with clear water.
- Irrigate early in the day so foliage is dry by nightfall to prevent diseases.

#### STAGE 3 Growth and development of true leaves (5-7 days)

- Night temperature 65-70°F (18-21°C).
- Day temperature 60-65°F (16-18°C). •
- Allow the soil to dry thoroughly between irrigations but avoid permanent wilting to promote root growth and control shoot growth.
- Gradually increase light levels to 1000-1500 footcandles.
- Maintain soil pH 5.5-5.8 and EC less than 1.0 mmhos/cm.
- Increase feed to 100 150 ppm N from 20 10 20 alternating with 14 0 14 or other calcium/ potassium nitrate fertilizer. Fertilize every 2 3 irrigations. If using 15-0-15 supplement with magnesium 1 2x
- during this stage, using magnesium sulfate (16 oz/100 gal) or magnesium nitrate. Do not mix magnesium sulfate with calcium nitrate as precipitate will form!
- Use DIF whenever possible, especially the first 2 hours after sunrise, to control plant height.
- A-Rest, B-Nine, Bonzi, and Sumagic are all effective at controlling height of delphinium.

#### STAGE 4 Plants ready for transplanting or shipping (7 days)

- Night temperature 60-62°F (16-17°C).
- Day temperature 55-60°F (13-16°C).
- Allow soil to dry thoroughly between irrigations.
- Gradually increase light intensity to 1500-2500 foot-candles.
- Maintain soil pH 5.5-5.8 and EC less than 0.75 mmhos/cm.
- Fertilize with 14 0 14 or calcium/potassium nitrate feed at 100 150 ppm N as needed.

#### **DELPHINIUM: FORCING**

**DATE SOWN:** January

**TRANSPLANT: March** 

FLOWERING: June

DATE SOWN: June - August

#### **TRANSPLANT:** September

FLOWERING: June-July

FORCING TEMP: 30-35°F (-1-2°C)

DATE SOWN: September-October

**TRANSPLANT:** February

FLOWERING: June-July

**FORCING TEMP:** 32-40°F (0-4°C)

#### **JANUARY SOWING**

- Seed sown in January will be ready for sale in late April to early May.
- Plants will bloom the same year they are sown, but will be small and should be in one quart containers or smaller.

#### JUNE - AUGUST SOWING

Plants sown in June - August will bloom the following June-July.

#### SOIL TEMPERATURE

30-35°F (-1-2°C)

#### TRANSPLANT

Transplant into pots around September 15.

#### **OVER WINTERING**

- · Over winter the plants until spring in an unheated greenhouse or cold frame. The root system should be developed throughout
- the soil volume prior to over wintering.
- · Pots should be packed as close together as possible.
- If plants are over wintered outside, cover the plants with a thick layer of mulch.

#### **FERTILIZATION**

Fertilization during dormancy will not be necessary.

#### **SEPTEMBER - OCTOBER SOWING**

Plants sown in September - October will bloom the following June-July.

#### **TEMPERATURE**

Night: 32-35°F (0-2°C)

#### Day: 35-40°F (2-4°C)

#### TRANSPLANT

- Transplant to packs in early November.
- Transplant into pots in February.

#### **OVER WINTERING**

- Plants are grown at 40°F (4°C) for 12-15 weeks.
- Perennials grown at this time will compete with other crops for greenhouse space.

#### **FERTILIZATION**

Fertilize at 75-100 ppm N from 15-0-15 every other irrigation.

### Growing On to Finish

#### TEMPERATURE

Night: 50-55°F (10-13°C)

Day: 55-60°F (13-16°C)

#### LIGHT

Maintain medium light intensity, around 3000-5000 foot-candles.

#### MEDIA

Use a well-drained, disease-free soil-less medium with a medium initial nutrient charge and a pH 5.5-6.2.

#### **FERTILIZATION**

- Fertilize every other irrigation with 15-0-15 at 150-200 ppm nitrogen.
- Maintain medium electrical conductivity around 1.0 mmhos/cm (using 1:2 extraction).

#### **CONTROLLING HEIGHT**

- Once plants are rooted to the sides of the containers they can be allowed to wilt prior to irrigation to provide some height control.
- Height can also be controlled by withholding fertilizer, especially phosphorous and ammoniumform nitrogen.
- · Delphinium are responsive to day/night temperature differential (DIF), and are shorter with a negative DIF.
- A-Rest, B-Nine, Bonzi, and Sumagic are all effective at controlling height of delphinium.

Ball Horticultural Company 622 Town Road, West Chicago, Illinois, USA, 60185 630 879-BALL <u>www.ballsced.com</u>

## **Post Production Care**

#### **TEMPERATURE**

- · Delphinium should be displayed in a cool, below 70°F (21°C), shady location.
- · Optimum conditions may be difficult to maintain,
- Using a negative DIF will help keep the plants short and of high quality.

#### LIGHT

Delphinium prefer full sun to partial shade. Partial shading may be beneficial during retail display.

#### **DELPHINIUM: COMMON PROBLEMS**

**INSECTS:** Aphids. Cut worms

DISEASES: Bacterial diseases, Powdery mildew
